EAZYBI REPORT CUBE

MINIMUM VIABLE PRODUCT

MULTIPLE USER LOCK AND DELETE

Version #	Implemented By	Revision Date	Approved By	Approval Date	Reason
1.0	*Ankit Kumar Sain, Vinod Vaddi*	March 3, 2026	*Srivattsan Thirukannamangai Sudhakar*	March 3, 2026	Document review is completed and looks good with the MVP specifications.

1. INTRODUCTION

1.1 PURPOSE

The purpose of this document is to outline the design for implementing a user interface where a EazyBI report admin user can refer to the general cube for any custom report and custom code.

1.2 PROBLEM STATEMENT

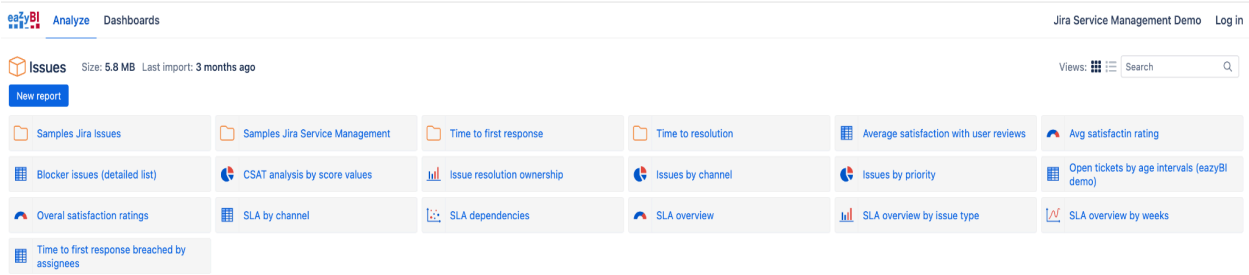
In current implementation, –

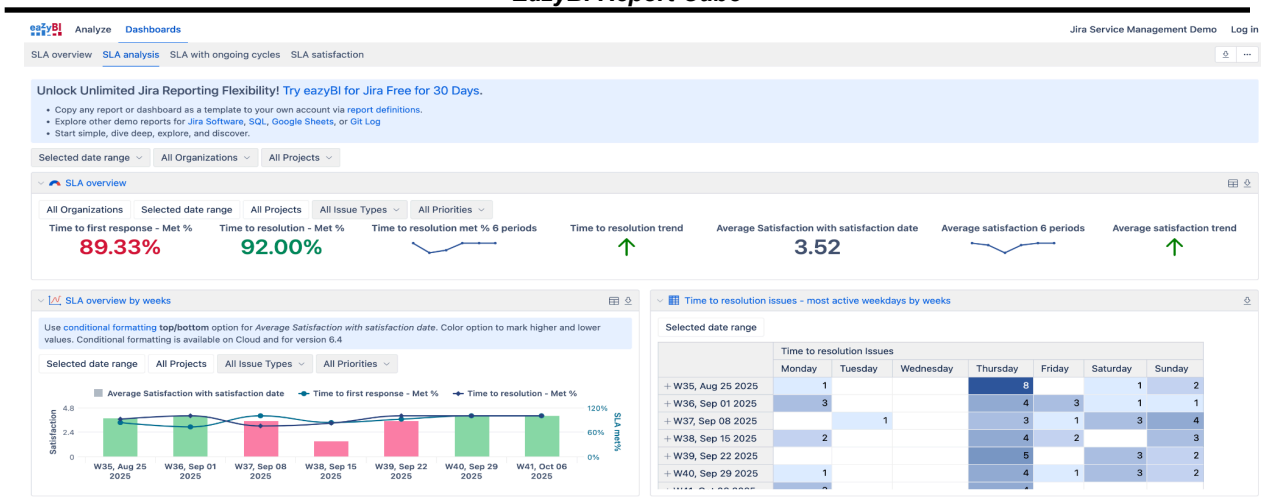
- There is no general EazyBI cube where report admin can check for custom reports and cube
- Report admin don't have much coding skills as it is a third party app which integrates with Jira for custom reports.

1.3 PROPOSED SOLUTION

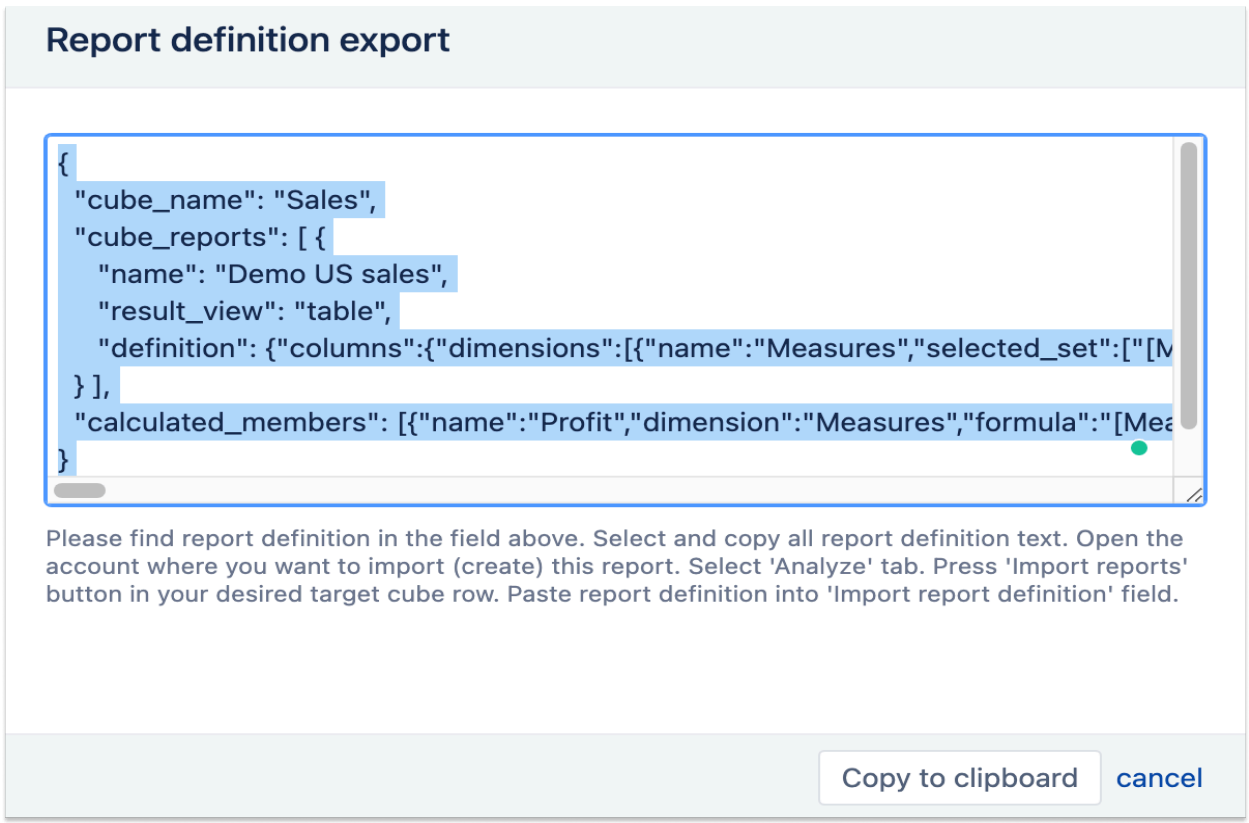
To address these, we wanted to create a specific EazyBI cube where users can check for custom reports and EazyBI measures. Also report admin can quickly create the report by exporting and importing existing report definition

1. **EazyBI Cube View**

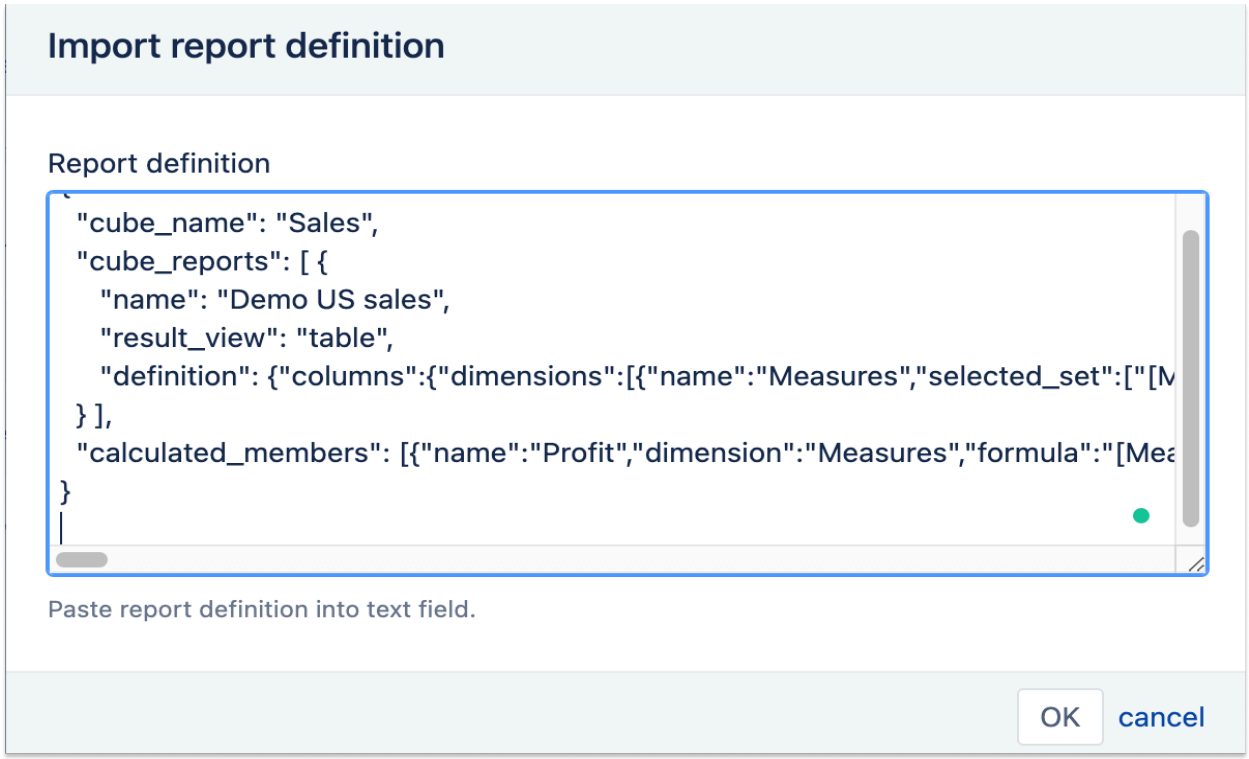




2. **Report Definition Export**



3. **Import Export Definition**



1.4 OPERATION EFFICIENCY

From last year until today, we have received 230+ dashboard and report requests. Most requests included multiple reports related to EazyBI, making the overall effort significant.

The resolution time for each request varies depending on the complexity of the requirements. The turnaround time typically includes:

- Understanding business requirements
- Data verification and validation
- Data import process if not imported
- Writing custom measure using MDX queries

Since many reports require custom MDX calculations and validation, the development effort can be time consuming.

1.5 EFFICIENCY IMPROVEMENT OPPORTUNITY

If we create and maintain a set of predefined standard reports, such as:

- Average Day in status

- Average Resolution Hours Month wise/Assignee wise
- Month-wise/Year-wise Count of Breached/Unbreached tickets
- Resolution Time Trends

We can significantly reduce the repetitive developing effort. By implementing standardized, reusable report template, we estimate a time savings of approximately 80%, leading to:

- Faster turnaround time
- Reduced dependency on custom MDX development
- Improved consistency in reporting
- Better operational productivity

1.6 STEPS TO CREATE CENTRALIZED EAZYBI CUBE

Instead of creating separate cubes per project:

- Create one centralized EazyBI cube
- Grant access to tsakeholders/report admin
- Restrict cube structure changes to admin users only

Configure unified data import:

- Go to Source Data - Jira Import Options
- Enable All required projects, standard fields(Status, Assignee, Priority, Resolution, etc
- Sprint & Change history
- Enable Import issue change history
- Enable worklogs
- Enable import story points/custom fields
- Create standard calculated measures using MDX query
- Create standard dimensions hierarchy
- Create predefined reports
- Avoid importing unnecessary custom fields
- Using of incremental import
- Schedule of automatic daily import
- Maintain MDX template repository
